Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT length cDNAs defined in the specification, and for the detection and/or
PT diagnosis of the abnormality of the proteins encoded by the full-length
PT cDNAs.
XX
PS Claim 8; SEQ ID NO 13209; 2537pp + Sequence Listing; English.
XX
CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC of an oligonucleotide comprising a sequence complementary to the
CC complementary strand of a polynucleotide which comprises a 5'-end
CC sequence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC oligonucleotide comprises at least 15 nucleotides and the combination of
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primer sets can be used in antisense therapy and in
CC gene therapy. The primers are useful for synthesising polynucleotides,
CC particularly full-length cDNAs. The primers are also useful for the
CC detection and/or diagnosis of the abnormality of the proteins encoded by
CC the full-length cDNAs. The primers allow obtaining of the full-length
CC cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC oligonucleotides, all of which are used in the exemplification of the
CC present invention

PT Novel proteins used to treat inflammatory diseases, NF-kappaB related
PT diseases and for improvement of anti-tumor treatments.
XX
PS Claim 9; Page 37-39; 48pp; English.
XX
CC This sequence represents the gene encoding human CD40 receptor associated
CC protein (CRAP). CRAP is a functional protein capable of interacting with
CC the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC I, where the protein has no homology to TNF receptor associated factor
CC (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC diseases, and for the improvement of anti-tumour diseases. Diseases which
CC may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC systemic lupus erythematosus, graft rejection, graft versus host disease,
CC allergy, and autoimmune disease. The proteins can be used to sensitize
CC tumour cells to anti-tumour treatments and to screen for compounds which
CC interfere with the interaction of the proteins with other protein
CC components of the TRAF, CD40 or NF-kappaB related pathway

XX
CC This invention relates to novel human genes and gene product which are
CC implicated in certain disease states. Compounds which modulate the
CC proteins of the invention may have cytostatic, antiinflammatory,
CC ophthalmological, antiarteriosclerotic or vulnerary activities. The
CC sequences of the invention may be useful for gene therapy. The invention
CC may be useful for diagnosing or treating a hypoxia-regulated condition,

CC such as tumourigenesis, angiogenesis, apoptosis, inflammation,
CC erythropoiesis, or the biological response to hypoxia conditions
CC including processes such as glycolysis, gluconeogenesis, glucose
CC transportation, catecholamine synthesis, iron transport or nitric oxide
CC synthesis. The disease includes cancer, ischaemic conditions, reperfusion
CC injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis,
CC inflammatory conditions or wound healing. The present sequence is that of
CC a disease related protein encoding DNA sequence of the invention.

PT New PRO polypeptides and polynucleotides, useful for treating e.g.
PT erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated
PT renal disease, or demyelinating diseases of the central or peripheral
PT nervous system.
XX
PS Claim 1; SEQ ID NO 475; 2940pp; English.
XX
CC The invention relates to a novel isolated nucleic acid and the PRO
CC polypeptide encoded by it. A protein of the invention has
CC antiinflammatory, antiarthritic, antirheumatic, immunosuppressive,
CC osteopathic, antidiabetic, dermatological, antipsoriatic, antiallergic,
CC antiasthmatic, hepatotropic, and respiratory activity. A polynucleotide
CC of the invention may have a use in gene therapy. The PRO polypeptide, its
CC agonist, antagonist, or antibody that specifically binds to the
CC polypeptide is useful for treating an immune related disorder such as
CC systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
CC juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an
CC idiopathic inflammatory myopathy, Sjogren's syndrome, systemic
CC vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune
CC thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal
CC disease, a demyelinating disease of the central or peripheral nervous
CC system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome,
CC a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary
CC disease, infectious or autoimmune chronic active hepatitis, primary
CC biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis,
CC inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's
CC disease, an autoimmune or immune-mediated skin disease, a bullous skin
CC disease, erythema multiforme, contact dermatitis, psoriasis, an allergic
CC disease, asthma, allergic rhinitis, atopic dermatitis, food
CC hypersensitivity, urticaria, an immunologic disease of the lung,
CC eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity
CC pneumonitis, a transplantation associated disease, graft rejection or
CC graft-versus-host disease. The present sequence encodes a PRO protein of
CC the invention.

PT   to a cancer treatment comprising administration of a modulator of cyclin-
PT   dependent kinase activity.
XX
PS   Claim 5; SEQ ID NO 921; 141pp; English.
XX
CC   This invention describes a novel method of predicting or determining
CC   whether a mammal will respond or is responding to an anti-cancer agent
CC   that modulates cyclin-dependent kinase (cdk) activity. The method
CC   comprises measuring the level of one or more biomarkers selected from
CC   2774 biomarkers given in the specification (nucleotide sequence SEQ ID
CC   NO:1246 (Genbank EST W28729) is especially preferred). The method of the
CC   invention is utilized in a kit for determining or predicting whether
CC   patient would be susceptible or resistant to treatment by an agent
CC   modulating cdk activity. The invention also describes a method for
CC   utilizing individualized genetic profiles for treating diseases and
CC   disorders based on patient's response and molecular level, specialized
CC   microarrays comprising the biomarkers described, antibodies directed
CC   against the biomarkers and a cell culture model to identify biomarkers.
CC   The cdk modulator is preferably N-5-[[5-(1,1-Dimethylethyl)-2-
CC   oxazolyl]methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
CC   tartaric acid salt. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
CC   sequence encodes a biomarker used in the method of the invention.

PT Novel nucleic acids and polypeptides, useful for treating disorders such
PT as central nervous system injuries.
XX
PS Claim 1; SEQ ID NO 1200; 10078pp; English.
XX
CC The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC immunosuppressant and cytostatic activity. The polynucleotides are useful
CC in gene therapy. A composition containing a polypeptide or polynucleotide
CC of the invention may be used to treat diseases of the peripheral nervous
CC system, such as peripheral nervous injuries, peripheral neuropathy and
CC localised neuropathies and central nervous system diseases, such as
CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC utilisation of the activities such as: Immune system suppression,
CC Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC assays for receptor activity, arthritis and inflammation, leukaemias and
CC C.N.S disorders. Note: The sequence data for this patent did not form
CC part of the printed specification

XX
CC   The invention describes an isolated polynucleotide (I) comprising a fully
CC   defined (S1) of 749, 3188, 2484, 1169, 2936, 1467, 5773, 5714, 4041,
CC   1372, 3996, 3945, 2735, 1788, 585, 1782, 927, 5714 or 2282 nucleotides as
CC   given in the specification, its translated or protein coding portion, its
CC   extracellular portion or its active domain. The GPCR-like polypeptides
CC   and polynucleotides are useful for the treatment of diseases of
CC   ophthalmic, neurological, immunological and nephritic systems. They may
CC   also be used to treat hormonal dysfunction, cancer, atherosclerosis and
CC   diabetes. The antibodies are useful for detecting or quantitating the
CC   polypeptide in tissue. The polypeptides can also be used as molecular
CC   weight markers and as a food supplement. This sequence represents a human
CC   polynucleotide of the invention.

PT   New polynucleotide, useful for treating diseases e.g., cancer or
PT   neurodegenerative diseases.
XX
PS   Claim 1; SEQ ID NO 889; 99pp; English.
XX
CC   The invention relates to a polynucleotide comprising a sequence given in
CC   the specification, or its mature protein-coding portion, or its
CC   complement. The polynucleotide is useful for treating diseases e.g.,
CC   cancer or neurodegenerative diseases and many others listed in the
CC   specification. The present sequence represents a novel human cDNA. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification but was obtained in electronic format directly from USPTO
CC   at seqdata.uspto.gov/sequence.html?DocID=20030104529.

PT   Novel nucleic acids and polypeptides, useful for treating disorders such
PT   as central nervous system injuries.
XX
PS   Claim 1; SEQ ID NO 4772; 10078pp; English.
XX
CC   The invention relates to human nucleic acids (AAI57798-AAI61369) and the
CC   encoded polypeptides (AAM38642-AAM42213) with nootropic,
CC   immunosuppressant and cytostatic activity. The polynucleotides are useful
CC   in gene therapy. A composition containing a polypeptide or polynucleotide
CC   of the invention may be used to treat diseases of the peripheral nervous
CC   system, such as peripheral nervous injuries, peripheral neuropathy and
CC   localised neuropathies and central nervous system diseases, such as
CC   Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
CC   lateral sclerosis, and Shy-Drager Syndrome. Other uses include the
CC   utilisation of the activities such as: Immune system suppression,
CC   Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic
CC   and thrombolytic activity, cancer diagnosis and therapy, drug screening,
CC   assays for receptor activity, arthritis and inflammation, leukaemias and
CC   C.N.S disorders. Note: The sequence data for this patent did not form
CC   part of the printed specification

PT   New combination comprising cDNAs that are differentially expressed in
PT   colon disorder, useful for diagnosing, treating, staging or monitoring
PT   treatment for colon cancers.
XX
PS   Claim 1; SEQ ID NO 88; 231pp; English.
XX
CC   The invention relates to a combination comprising cDNAs that are
CC   differentially expressed in colon disorder. The methods and compositions
CC   of the present invention are useful for diagnosing, treating, staging or
CC   monitoring treatment for colon cancer. They are also useful in high
CC   throughput methods for using cDNAs to detect differential expression of
CC   nucleic acids in a sample, screening molecules or compounds to identify a
CC   ligand which specifically binds a cDNA and using a protein to screen
CC   molecules or compounds to identify at least one ligand which specifically
CC   binds the protein. The present sequence represents a human cDNA
CC   differentially expressed in colon cancer.

PT   Colon cancer associated gene sequences, referred to as colon cancer
PT   antigens, useful for the treatment, prevention, and diagnosis of colon
```

```
PT   disorders such as colon cancer.
XX
PS   Claim 1; Page 597; 2104pp; English.
XX
CC   AAC97991 to AAC98763 encode the human colon cancer associated proteins,
CC   called human colon cancer antigens, given in AAB53234 to AAB54006. The
CC   human colon cancer antigens can have cytostatic, cardioactive, muscular;
CC   neuroprotective, immunomodulatory, gynaecological, gastrointestinal,
CC   vulnerary, nephrotropic, antiinfective and antibacterial activities, and
CC   can be used in gene therapy. The colon cancer antigen polynucleotides,
CC   proteins and antibodies to the proteins are useful for the prevention,
CC   treatment and diagnosis of colon disorders, such as colon cancer. The
CC   polynucleotides may be used in diagnostics and research, such as for
CC   chromosome identification, and as hybridisation probes. The proteins may
CC   also be used to prevent diseases such as neural disorders, immune system
CC   disorders, muscular disorders, reproductive disorders, gastrointestinal
CC   disorders, wounds, renal disorders, infectious diseases, and
CC   cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent
CC   sequences used in the exemplification of the present invention

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 22058; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
PS   Claim 1; SEQ ID NO 1067; 87pp; English.
XX
CC   The invention relates to polynucleotide and polypeptide sequences
CC   associated with cancer, particularly colon cancer. Also disclosed are (i)
CC   an expression vector comprising the polynucleotide, (ii) a host cell
CC   transformed or transfected with the expression vector, (iii) an isolated
CC   antibody, or its antigen-binding fragment, which specifically binds to
CC   the polypeptide, (iv) a method of detecting or determining the presence
CC   of cancer in a patient, (v) a fusion protein comprising at least one of
CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, which both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

PT New breast tumor protein genes used, in vaccines for immunotherapy, or
PT for diagnosis of breast cancer.
XX
PS Claim 3; Page 60; 70pp; English.
XX
CC This sequence encodes a human breast tumour protein immunogenic fragment
CC of the invention. The polypeptides or nucleic acids encoding them are
CC useful in vaccines and pharmaceutical compositions for manufacture of
CC medicaments for inhibiting the development of breast cancer in a patient.
CC They can also be used to treat breast cancer. Antibodies against these
CC polypeptides can be used to detect and monitor progression of breast
CC cancer in patients. Primers and probes derived from the polynucleotides
CC encoding the breast proteins are useful for detection of breast cancer.
CC Peripheral blood cells from a patient incubated in the presence of at
CC least one polypeptide, such that T cells proliferate, are useful in
CC manufacture of a medicament for treating breast cancer in a patient.
CC Antigen presenting cells incubated in the presence of at least one
CC polypeptide are also useful for treating breast cancer

XX
PT   Polynucleotides encoding breast tumor polypeptides, useful for treating
PT   breast cancer or stimulating an immune response.
XX
PS   Claim 1; Page 131; 150pp; English.
XX
CC   The invention relates to polynucleotides encoding breast tumour
CC   polypeptides. The sequences are useful for treating cancer, preferably
CC   breast cancer, in a patient or for stimulating an immune response. The
CC   polynucleotides and polypeptides are also useful in the diagnosis and
CC   monitoring of breast cancer. A method for detecting the presence of a
CC   cancer in a patient, comprises obtaining a biological sample from the
CC   patient, contacting the biological sample with a binding agent that binds
CC   to a breast tumour polypeptide, detecting in the sample an amount of
CC   polypeptide that binds to the binding agent, and comparing the amount of
CC   polypeptide to a predetermined cut-off value, therefore determining the
CC   presence of a cancer in the patient. Sequences ABK28920-ABK29025
CC   represent cDNA clones encoding human breast tumour polypeptides of the
CC   invention

XX
PS   Claim 1; SEQ ID NO 1070; 87pp; English.
XX
CC   The invention relates to polynucleotide and polypeptide sequences
CC   associated with cancer, particularly colon cancer. Also disclosed are (i)
CC   an expression vector comprising the polynucleotide, (ii) a host cell
CC   transformed or transfected with the expression vector, (iii) an isolated
CC   antibody, or its antigen-binding fragment, which specifically binds to
CC   the polypeptide, (iv) a method of detecting or determining the presence
CC   of cancer in a patient, (v) a fusion protein comprising at least one of
CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

XX
PS Claim 1; SEQ ID NO 1084; 87pp; English.
XX
CC The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the

```
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic

XX
PS Claim 1; SEQ ID NO 548; 87pp; English.
XX
CC The invention relates to polynucleotide and polypeptide sequences
CC associated with cancer, particularly colon cancer. Also disclosed are (i)
CC an expression vector comprising the polynucleotide, (ii) a host cell
CC transformed or transfected with the expression vector, (iii) an isolated
CC antibody, or its antigen-binding fragment, which specifically binds to
CC the polypeptide, (iv) a method of detecting or determining the presence
CC of cancer in a patient, (v) a fusion protein comprising at least one of
CC the polypeptides, (vi) an oligonucleotide that hybridises to the
CC polynucleotide sequence under highly stringent conditions, and (vii) a
CC method of stimulating and/or expanding T cells specific for a tumour
CC protein. The polypeptide specifically comprises the amino acid sequence
CC of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC frames (ORFs) of C636S. These polypeptides are encoded by the
CC polynucleotide sequences, where both are capable of eliciting a humoral
CC and/or cellular immune response. The polynucleotides, polypeptides, and
CC antibodies are useful for diagnosing, preventing or treating cancer,
CC particularly colon cancer. The polynucleotide and polypeptide sequences
CC are also useful in DNA strand invasion, antisense inhibition, mutational
CC analysis, nucleic acid purification, isolation of transcriptionally
CC active genes, blocking or transcription factor binding, genome cleavage
CC or in situ hybridisation, and as enhancers of transcription or
CC biomarkers. This sequence represents a human colon cancer associated
CC cDNA. Note: The sequence data for this patent was obtained in electronic
CC format directly from the USPTO web site at seqdata.uspto.gov

PT Novel proteins used to treat inflammatory diseases, NF-kappaB related
PT diseases and for improvement of anti-tumor treatments.
XX
PS Claim 10; Page 41-43; 48pp; English.
XX
CC This sequence represents the gene encoding mouse CD40 receptor associated
CC protein (CRAP). CRAP is a functional protein capable of interacting with
CC the cytoplasmic domain of CD40 and/or other receptors of the tumour
CC necrosis factor (TNF) receptor superfamily such as CD30 and TNF receptor
CC I, where the protein has no homology to TNF receptor associated factor
CC (TRAF)-proteins. The CD40 binding proteins can be used as modulators of
CC the CD40 signalling pathway, especially to diagnose and treat TRAF-
CC related, CD40-related, NF-kappaB related and/or Jun (kinase)-related
CC diseases, and for the improvement of anti-tumour diseases. Diseases which
CC may be treated include atherosclerosis, arthritis, multiple sclerosis,
CC systemic lupus erythematosus, graft rejection, graft versus host disease,
CC allergy, and autoimmune disease. The proteins can be used to sensitize
CC tumour cells to anti-tumour treatments and to screen for compounds which
CC interfere with the interaction of the proteins with other protein
CC components of the TRAF, CD40 or NF-kappaB related pathway

PT   New isolated nucleic acids and polypeptides capable of eliciting a
PT   humoral and/or cellular immune response, useful for diagnosing,
PT   preventing or treating cancer, particularly colon cancer.
XX
PS   Claim 1; SEQ ID NO 983; 87pp; English.
XX
CC   The invention relates to polynucleotide and polypeptide sequences
CC   associated with cancer, particularly colon cancer. Also disclosed are (i)
CC   an expression vector comprising the polynucleotide, (ii) a host cell
CC   transformed or transfected with the expression vector, (iii) an isolated
CC   antibody, or its antigen-binding fragment, which specifically binds to
CC   the polypeptide, (iv) a method of detecting or determining the presence
CC   of cancer in a patient, (v) a fusion protein comprising at least one of
CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

PT Array containing probes for genes involved in mitochondrial biology,
PT useful for determining mitochondrial biology gene expression profiles for
PT use in diagnosing pathologies and identifying biochemical pathways.
XX
PS Claim 2; SEQ ID NO 2153; 201pp; English.
XX
CC The invention relates to a novel array comprising at least two isolated
CC nucleotide molecules, each molecule having a sequence capable of uniquely
CC hybridising to a nucleic acid molecule which is an expression product of
CC a gene involved in mitochondrial biology. The array comprises two or more
CC isolated nucleic acid molecules or spots, each molecule having a sequence
CC chosen from sequence of 994 human probes and 2046 mouse probes. An array
CC of the invention is useful for determining an expression profile of a
CC mouse or human sample containing nucleic acid, by contacting the array
CC with the sample under conditions allowing selective hybridisation, and
CC measuring hybridisation of nucleic acid in the sample to the array to
CC produce an expression profile. The array is also useful for determining
CC an expression profile of a first labelled sample containing nucleic acid
CC relative to a second, differently labelled sample containing nucleic
CC acid. The second sample is a reference or a standard. An array is useful
CC for determining an expression profile diagnostic of an energy-metabolism-
CC related physiological condition. An array of the invention is useful for
CC determining mitochondrial biology gene expression profiles of organisms,
CC such as human, mice and closely related species, tissue and organs of
CC such organisms, which are useful for determining expression profiles
CC diagnostic of energy metabolism-related physiological conditions,
CC diagnosing such physiological conditions, identifying biochemical
CC pathways, genes, and mutations involved in such physiological conditions,
CC identifying therapeutic agents useful for preventing and/or treating such
CC physiological conditions, evaluating and/or monitoring the efficacy of
CC such therapies, and creating and identifying animal models of human
CC energy metabolism-related physiological conditions. An array is also
CC useful for defining expression signatures or profiles for mitochondrial
CC diseases, as well as distinguishing clinical disorders that result from
CC oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,
CC apoptosis and aging. An array of the invention contains probes of genes
CC not previously recognised to participate in mitochondrial biology. The
CC sequences shown in ADD33224-ADD35260 represent murine mitochondrial DNA
CC clones used to make the probes of the invention. Some sequences are not
CC present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,
CC 1906, 2408 and 2643.

PT   New isolated nucleic acids and polypeptides capable of eliciting a
PT   humoral and/or cellular immune response, useful for diagnosing,
PT   preventing or treating cancer, particularly colon cancer.
XX
PS   Claim 1; SEQ ID NO 1363; 87pp; English.
XX
CC   The invention relates to polynucleotide and polypeptide sequences
CC   associated with cancer, particularly colon cancer. Also disclosed are (i)
CC   an expression vector comprising the polynucleotide, (ii) a host cell
CC   transformed or transfected with the expression vector, (iii) an isolated
CC   antibody, or its antigen-binding fragment, which specifically binds to
CC   the polypeptide, (iv) a method of detecting or determining the presence
CC   of cancer in a patient, (v) a fusion protein comprising at least one of
CC   the polypeptides, (vi) an oligonucleotide that hybridises to the
CC   polynucleotide sequence under highly stringent conditions, and (vii) a
CC   method of stimulating and/or expanding T cells specific for a tumour
CC   protein. The polypeptide specifically comprises the amino acid sequence
CC   of C634S, C635S, C637S, C640S, C636S or one of the potential open reading
CC   frames (ORFs) of C636S. These polypeptides are encoded by the
CC   polynucleotide sequences, where both are capable of eliciting a humoral
CC   and/or cellular immune response. The polynucleotides, polypeptides, and
CC   antibodies are useful for diagnosing, preventing or treating cancer,
CC   particularly colon cancer. The polynucleotide and polypeptide sequences
CC   are also useful in DNA strand invasion, antisense inhibition, mutational
CC   analysis, nucleic acid purification, isolation of transcriptionally
CC   active genes, blocking or transcription factor binding, genome cleavage
CC   or in situ hybridisation, and as enhancers of transcription or
CC   biomarkers. This sequence represents a human colon cancer associated
CC   cDNA. Note: The sequence data for this patent was obtained in electronic
CC   format directly from the USPTO web site at seqdata.uspto.gov

PT   Primer sets for synthesizing polynucleotides, particularly the 5602 full-
PT   length cDNAs defined in the specification, and for the detection and/or
PT   diagnosis of the abnormality of the proteins encoded by the full-length
PT   cDNAs.
XX
PS   Claim 1; SEQ ID NO 4908; 2537pp + Sequence Listing; English.
XX
CC   The present invention describes primer sets for synthesising 5602 full-
CC   length cDNAs defined in the specification. Where a primer set comprises:
CC   (a) an oligo-dT primer and an oligonucleotide complementary to the
CC   complementary strand of a polynucleotide which comprises one of the 5602
CC   nucleotide sequences defined in the specification, where the
CC   oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC   of an oligonucleotide comprising a sequence complementary to the
CC   complementary strand of a polynucleotide which comprises a 5'-end
CC   sequence and an oligonucleotide comprising a sequence complementary to a
CC   polynucleotide which comprises a 3'-end sequence, where the
CC   oligonucleotide comprises at least 15 nucleotides and the combination of
CC   the 5'-end sequence/3'-end sequence is selected from those defined in the
CC   specification. The primer sets can be used in antisense therapy and in
CC   gene therapy. The primers are useful for synthesising polynucleotides,
CC   particularly full-length cDNAs. The primers are also useful for the
CC   detection and/or diagnosis of the abnormality of the proteins encoded by
CC   the full-length cDNAs. The primers allow obtaining of the full-length
CC   cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
CC   AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
CC   represent human amino acid sequences; and AAH13629 to AAH13632 represent
CC   oligonucleotides, all of which are used in the exemplification of the
CC   present invention

PT   New isolated polynucleotide and encoded polypeptides, useful in
PT   diagnostics, forensics, gene mapping, identification of mutations
PT   responsible for genetic disorders or other traits and to assess
PT   biodiversity.
XX
PS   Claim 1; SEQ ID NO 22059; 103pp; English.
XX
CC   The invention relates to isolated polynucleotide (I) and polypeptide (II)
CC   sequences. (I) is useful as hybridisation probes, polymerase chain
CC   reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
CC   and in recombinant production of (II). The polynucleotides are also used
CC   in diagnostics as expressed sequence tags for identifying expressed
CC   genes. (I) is useful in gene therapy techniques to restore normal
CC   activity of (II) or to treat disease states involving (II). (II) is
CC   useful for generating antibodies against it, detecting or quantitating a
CC   polypeptide in tissue, as molecular weight markers and as a food
CC   supplement. (II) and its binding partners are useful in medical imaging
CC   of sites expressing (II). (I) and (II) are useful for treating disorders
CC   involving aberrant protein expression or biological activity. The
CC   polypeptide and polynucleotide sequences have applications in
CC   diagnostics, forensics, gene mapping, identification of mutations
CC   responsible for genetic disorders or other traits to assess biodiversity
CC   and to produce other types of data and products dependent on DNA and
CC   amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic
CC   coding sequences of the invention. Note: The sequence data for this
CC   patent did not appear in the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Novel isolated polynucleotide encoding a polypeptide comprising a portion
PT   of colon tumor protein, useful for detection, diagnosis and therapy of
PT   human colon cancer.
XX
PS   Claim 1; Page 182; 220pp; English.
XX
CC   The invention relates to an isolated polynucleotide (I) encoding a
CC   polypeptide (II) comprising at least a portion of a colon tumour protein.
CC   (I), (II) and antibody (III) to (II) are useful for determining the
CC   presence of a cancer in a patient. (I), (II) or antigen presenting cells
CC   expressing (I) is useful for stimulating and/or expanding T cells
CC   specific for a tumour protein, by contacting T cells with (I), (II) or
CC   antigen-presenting cells that express (I), under conditions and for a
CC   time sufficient to permit the stimulation and/or expansion of T cells.
CC   (I), (II), or antigen presenting cells that express (II) are useful for
CC   treating colon cancer in a patient by incubating CD4+ and/or CD8+ T cells
CC   isolated from a patient with (I), (II) or antigen presenting cells that
CC   express (II), such that T cells proliferate, and administering to the
CC   patient an effective amount of the proliferated T cells, thus inhibiting
CC   the development of a cancer in the patient. (I) or (II) is useful in
CC   vaccines and pharmaceutical compositions for prevention and treatment of
CC   colon malignancies and for the diagnosis and monitoring of such cancers.
CC   (I), (II) or (III) is useful for detection, diagnosis and/or therapy of
CC   human colon cancer. (I) is useful as a probe or primer for nucleic acid
CC   hybridisation, and in the design and preparation of ribozyme molecules
CC   for inhibiting expression of (II) in tumour cells. ABK27564-ABK27807

PT   New isolated polynucleotide and pancreatic tumor polypeptides, useful for
PT   diagnosing, preventing and/or treating cancer, particularly pancreatic
PT   cancer.
XX
PS   Claim 1; SEQ ID NO 1367; 300pp + Sequence Listing; English.
XX
CC   The invention relates to an isolated polynucleotide (I) comprising: (a)
CC   any of a group of over 4000 nucleotide sequences (ABV94628-ABV99145); (b)
CC   complements of (a); (c) sequences consisting of at least 20 contiguous
CC   residues of (a); (d) sequences that hybridize to (a), under moderately
CC   stringent conditions; (e) sequences having at least 75% or 90% identity
CC   to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-
CC   ABP68637) encoded by (I) and oligonucleotide can be used to detect cancer
CC   in a patient and compositions comprising polypeptides, polynucleotides,
CC   antibodies, fusion proteins, T cell populations and antigen presenting
CC   cells expressing the polypeptide are useful in treating pancreatic cancer
CC   and stimulating an immune response. The polynucleotides can be used as
CC   probes or primers for nucleic acid hybridisation, in the design and
CC   preparation of ribozyme molecules for inhibiting expression of the tumour
CC   polypeptides and proteins in the tumour cells, in vaccines and for gene
CC   therapy. Note: The sequence data for this patent did not form part of the
CC   printed specification, but was obtained in electronic format directly
CC   from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Novel isolated colon tumor polynucleotide differentially expressed in
PT   colon tumor or colon metastatic tumor and polypeptides encoded by them,
PT   useful for inhibiting development of cancer in patient.
XX
PS   Claim 1; SEQ ID NO 50; 105pp; English.
XX
CC   ABL36412 to ABL38645 represent human colon tumour antigen cDNA clones (I)
CC   which were isolated from human colon tumour and colon metastatic tumour
CC   cDNA libraries. (I) have cytostatic activity and can be used in vaccine
CC   production. (I) can be used for stimulating and/or expanding T cells
CC   specific for a tumour protein on contact with the T cells. They are also
CC   useful for inhibiting the development of cancer in a patient. (I) can be
CC   used as probes or primers for nucleic acid hybridisation, for preparing
CC   mutant species primers, or primers for use in genetic constructions. (I)
CC   can be used in the diagnosis of a colon tumour

XX
PT   New isolated prostate-derived nucleic acids - used to develop products
PT   which may have cytokine, immune regulatory, haematopoiesis regulating,
PT   anti-inflammatory or tumour inhibition activity.
XX
PS   Claim 1; Page 298; 675pp; English.
XX
CC   AAX40438 to AAX40715 represent 5' expressed sequence tags (ESTs) for
CC   human secreted proteins expressed in prostate, and encode the proteins
CC   given in AAY11716 to AAY11993 respectively. The proteins given represent
CC   the signal peptide and an N-terminal fragment of a secreted protein. The
CC   nucleic acid sequences can be used for producing secreted human gene
CC   products. They can also be used to develop products for diagnosis and
CC   therapy. The proteins obtained may have cytokine activity, cell
CC   proliferation and differentiation activity, haematopoiesis regulating
CC   activity, tissue growth regulating activity, reproductive hormone
CC   regulating activity, chemotactic/chemokinetic activity, haemostatic and
CC   thrombolytic activity, receptor/ligand activity, anti-inflammatory
CC   activity, tumour inhibition activity or other activities. The products
CC   can be used in forensic, gene therapy and chromosome mapping procedures.
CC   The sequences can also be used for obtaining corresponding promoter
CC   sequences. The nucleic acids encoding the signal peptides can be used for
CC   directing extracellular secretion of a polypeptide or the insertion of a
CC   polypeptide into a membrane, or importing a polypeptide into a cell

PT   New isolated nucleic acid molecule that encodes a plant protein or its
PT   fragment, useful for isolating a variety of agronomically significant
PT   genes associated with plant growth, quality or yield, and as molecular
PT   tags to map genes.
XX
PS   Claim 1; SEQ ID NO 14543; 34pp; English.
XX
CC   The invention relates to 17880 cotton expressed sequence tags (ESTs;
```

```
CC   ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated
CC   from primed or non-primed seeds from variety DP50B, mature seeds from
CC   variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
CC   tissue, developing fibres, carpel walls and septa from variety
CC   Nucotton33B. The invention also relates to substantially purified
CC   proteins or their fragments encoded by nucleic acid molecules of the
CC   invention, and to transformed plants having a nucleic acid construct
CC   comprising a nucleic acid of the invention. The cotton ESTs are useful as
CC   molecular tags to isolate genetic regions, to isolate genes, to map
CC   genes, to determine gene function and to determining whether genes are
CC   members of a particular gene family. The nucleic acid molecules may be
CC   used for isolating a variety of agronomically significant genes
CC   associated with plant growth, quality, yield, and could also serve as
CC   links in metabolic and catabolic pathways. The nucleic acid molecules are
CC   also useful for identifying genes important in initiating and maintaining
CC   seed germination or that may be used to mitigate stresses encountered
CC   during seed germination. The ESTs additionally enable the acquisition of
CC   promoters and cis-regulatory elements which will be useful to express
CC   agronomically significant genes in these tissues and/or other tissues,
CC   and also permits the acquisition of molecular markers useful in breeding
CC   schemes, genetic and molecular mapping, and in cloning of agronomically
CC   significant genes. The nucleic acid molecules are further useful for
CC   detecting the expression level or pattern of a protein or mRNA and for
CC   detecting the presence or quantity of a protein by tissue printing. The
CC   present sequence represents a specifically claimed EST isolated from a
CC   cotton variety Nucotton33B gynoecium tissue cDNA library (LIB3829). The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from the US
CC   patent office at seqdata.uspto.gov/sequence.html?DocID=US20040123340

XX
CC   The present invention relates to a method of detecting the presence of
CC   ovarian cancer in a patient, involving detecting ovarian cancer
CC   associated polynucleotides. The method is not only used to detect the
CC   presence of cancer, preferably ovarian cancer in a patient, but also is
CC   used to stimulate and/or expand T cells specific for an ovarian tumour
CC   protein. The sequences can be used in vaccines used to treat cancer. The
CC   present sequence is an ovarian cancer associated coding sequence

PT Determining presence or absence of cancer in patient by contacting
PT patient sample with oligonucleotide that hybridizes to polynucleotide
PT encoding ovarian carcinoma antigen, and detecting amount of hybridization
PT in sample.
XX
PS Example 1; Col 223-224; 152pp; English.
XX
CC The present invention relates to compositions and methods for determining
CC presence or absence of cancer in patient. The method comprising
CC contacting a biological sample with an oligonucleotide that hybridises to
CC partial polynucleotide sequence encoding for human ovarian carcinoma
CC antigen, or its complement. The method and compositions are useful for
CC the therapy and diagnosis of ovarian cancer. The method can be used to
CC identify tumour antigens that are secreted from ovarian carcinoma and/or
CC other tumours. Effective cancer detection is achieved using the method of
CC the invention. ABX72720-ABX73050 represent partial cDNA sequences
CC encoding human ovarian carcinoma antigens

PS Claim 4; SEQ ID NO 1230; 2081pp + Sequence Listing; English.
XX
CC The invention relates to novel genes (ABL89449-ABL90853) and proteins
CC (ABB89040-ABB90444) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing
CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC infectious diseases such as viral, bacterial, fungal and parasitic
CC infections. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

CC   The invention relates to a novel isolated polypeptide. A protein of the
CC   invention has cytostatic, vasotropic, haemostatic, cardiovascular,
CC   gastrointestinal, immunomodulator, inotropic, cerebroprotective,
CC   neuroprotective, nephrotropic, antiinflammatory, antibacterial, virucide,
CC   gynaecological, and antidiabetic activity. A polynucleotide of the
CC   invention may have a use in gene therapy, and as a vaccine. The methods
CC   and compositions of the invention are useful for diagnosing, preventing,
CC   treating and/or ameliorating diseases such as cancer (neural,
CC   reproductive, gastrointestinal, endocrine, renal, CNS and respiratory
CC   neoplasias), blood disorders, immune disorders, infections, inflammatory
CC   disorders and type II diabetes. They can also be used in chromosome
CC   identification, screening assays and molecular weight markers. The
CC   present sequence is used in the exemplification of the invention.

PT microbial source, useful for producing plants with improved properties.
XX
PS Claim 1; SEQ ID NO 24191; 122pp; English.
XX
CC The invention relates to a recombinant DNA construct comprising a
CC promoter functional in a plant cell, where the promoter is positioned to
CC provide for expression of a polynucleotide encoding a polypeptide from a
CC microbial source. The invention also relates to a transformed plant
CC comprising the recombinant DNA construct and a method of producing a
CC transformed plant having an improved property. The plant is a crop plant
CC such as maize or soybean. The method of producing a transformed plant
CC having an improved property comprises transforming a plant with the
CC recombinant DNA construct and growing the transformed plant, where the
CC polynucleotide or polypeptide is useful for improving plant properties.
CC The recombinant DNA construct is useful for producing plants with
CC improved plant properties, e.g. improved cold, heat or drought tolerance,
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,
CC increased resistance to plant disease, better growth rate by modification
CC of the cell cycle pathway with plant growth regulators, increased rate of
CC homologous recombination, modified seed oil or protein yield and/or
CC content, improved yield by modification of carbohydrate, nitrogen or
CC phosphorus use and/or uptake, by modification of photosynthesis or by
CC providing improved plant growth and development under at least one stress
CC condition, improved lignin production or improved galactomannan
CC production. This sequence represents a bacterial polynucleotide used in
CC the scope of the invention. Note: The sequence data for this patent did
CC not form part of the printed specification but was obtained in electronic
CC format from USPTO at seqdata.uspto.gov/sequence.html.

```

```
CC   The present invention relates to a methods for screening biologically
CC   active agents, such as candidate drugs, to determine whether the agent
CC   possesses a defined biological activity. The methods involve making one
CC   or more comparisons chosen from comparing efficacy value of agent to
CC   reference efficacy value, comparing a toxicity value of the agent to
CC   reference toxicity value, comparing a classifier value of the agent to
CC   reference classifier value, and using the comparison result(s) to
CC   determine whether the agent possesses the defined biological activity.
CC   Also claimed is a population of oligonucleotide probes (I) specific for
CC   measuring the expression levels of members of a classifier population of
CC   genes or a toxicity-related population of genes. (I) are useful for
CC   measuring the expression levels of genes that are useful for identifying
CC   agonists or partial agonists of Peroxisome Proliferator-Activated
CC   Receptor (PPAR) gamma. ADZ62007-ADZ62272 are oligonucleotide probes which
CC   are useful in the method of the invention to measure the expression
CC   pattern of the classifier-related population of mouse genes ADZ61748-
CC   ADZ62006. Note: The sequence data for this patent did not form part of
CC   the printed specification, but was obtained in electronic format directly
CC   from USPTO at seqdata.uspto.gov/sequence.html?DocID=20050084872.

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 1141; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT New antisense nucleic acids, useful for identifying proteins or screening
PT for homologous nucleic acids required for cellular proliferation to
PT isolate candidate molecules for rational drug discovery programs.
XX
PS Claim 14; SEQ ID NO 22362; 1766pp; English.
XX
CC The invention relates to an isolated nucleic acid comprising any one of
CC the 6213 antisense sequences given in the specification where expression
CC of the nucleic acid inhibits proliferation of a cell. Also included are:
CC (1) a vector comprising a promoter operably linked to the nucleic acid
CC encoding a polypeptide whose expression is inhibited by the antisense
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC polypeptide or its fragment whose expression is inhibited by the
CC antisense nucleic acid; (4) an antibody capable of specifically binding
CC the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC proliferation or the activity of a gene in an operon required for
CC proliferation; (7) identifying a compound that influences the activity of
CC the gene product or that has an activity against a biological pathway
CC required for proliferation, or that inhibits cellular proliferation; (8)
CC identifying a gene required for cellular proliferation or the biological
CC pathway in which a proliferation-required gene or its gene product lies
CC or a gene on which the test compound that inhibits proliferation of an
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC compound's activity; (11) a culture comprising strains in which the gene
CC product is overexpressed or underexpressed; (12) determining the extent
CC to which each of the strains is present in a culture or collection of
CC strains; or (13) identifying the target of a compound that inhibits the
CC proliferation of an organism. The antisense nucleic acids are useful for
CC identifying proteins or screening for homologous nucleic acids required
CC for cellular proliferation to isolate candidate molecules for rational
CC drug discovery programs, or for screening homologous nucleic acids
CC required for proliferation in cells other than S. aureus, S. typhimurium,
CC K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC prokaryotic essential genes. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT   New antisense nucleic acids, useful for identifying proteins or screening
PT   for homologous nucleic acids required for cellular proliferation to
PT   isolate candidate molecules for rational drug discovery programs.
XX
PS   Claim 14; SEQ ID NO 30809; 1766pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising any one of
CC   the 6213 antisense sequences given in the specification where expression
CC   of the nucleic acid inhibits proliferation of a cell. Also included are:
CC   (1) a vector comprising a promoter operably linked to the nucleic acid
CC   encoding a polypeptide whose expression is inhibited by the antisense
CC   nucleic acid; (2) a host cell containing the vector; (3) an isolated
CC   polypeptide or its fragment whose expression is inhibited by the
CC   antisense nucleic acid; (4) an antibody capable of specifically binding
CC   the polypeptide;(5) producing the polypeptide; (6) inhibiting cellular
CC   proliferation or the activity of a gene in an operon required for
CC   proliferation; (7) identifying a compound that influences the activity of
CC   the gene product or that has an activity against a biological pathway
CC   required for proliferation, or that inhibits cellular proliferation; (8)
CC   identifying a gene required for cellular proliferation or the biological
CC   pathway in which a proliferation-required gene or its gene product lies
CC   or a gene on which the test compound that inhibits proliferation of an
CC   organism acts; (9) manufacturing an antibiotic; (10) profiling a
CC   compound's activity; (11) a culture comprising strains in which the gene
CC   product is overexpressed or underexpressed; (12) determining the extent
CC   to which each of the strains is present in a culture or collection of
CC   strains; or (13) identifying the target of a compound that inhibits the
CC   proliferation of an organism. The antisense nucleic acids are useful for
CC   identifying proteins or screening for homologous nucleic acids required
CC   for cellular proliferation to isolate candidate molecules for rational
CC   drug discovery programs, or for screening homologous nucleic acids
CC   required for proliferation in cells other than S. aureus, S. typhimurium,
CC   K. pneumoniae or P. aeruginosa. The present sequence is one of the target
CC   prokaryotic essential genes. Note: The sequence data for this patent did
CC   not form part of the printed specification, but was obtained in
CC   electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   Use of DP119, DP444, DP810, DP685, WE474, DP160, RA977 or RA770 nucleic
PT   acid molecules or polypeptides, or their effectors or modulators, for
PT   manufacturing an agent for the diagnosis, prevention or treatment of
PT   pancreatic disorders.
XX
PS   Claim 3; SEQ ID NO 33; 125pp; English.
XX
CC   The present invention describes a nucleic acid molecule (I) selected from
CC   DP119, DP444, DP810, DP685, WE474, DP160, RA977 and RA770, or its encoded
CC   polypeptide, or a fragment or variant of the nucleic acid or polypeptide,
CC   or an effector/modulator of the nucleic acid or polypeptide. (I) is used
CC   in manufacturing a pharmaceutical agent, in monitoring or controlling the
CC   function of a gene or gene product influenced or modified by a DP119,
CC   DP444, DP810, DP685, WE474, DP160, RA977 or RA770 polypeptide, or in
CC   identifying substances that interact with the polypeptide. (I) has
CC   antidiabetic, anorectic and neuroprotective activities, and can be used
CC   in gene therapy. (I) is useful for diagnostic or therapeutic
CC   applications, or for manufacturing an agent for diagnosis, monitoring,
CC   prevention or treatment of pancreatic disorders, such as diabetes and
CC   related disorders, as well as neurodegenerative disorders, and other
CC   diseases. It may also be used for detecting and/or verifying, for the
CC   treatment, alleviation and/or prevention, of a pancreatic dysfunction
CC   (e.g. diabetes, hyperglycaemia or impaired glucose tolerance), and
CC   related disorders including obesity, and neurodegenerative disorders, and
CC   others, in cells, cell masses, organs and/or subjects. It is also used
CC   for regenerating or for promoting the differentiation and/or function of
CC   beta-cells in vitro and/or in vivo. (I) may also be used in preparing a
CC   non-human animal which over- or under-expresses the DP119, DP444, DP810,
CC   DP685, WE474, DP160, RA977 or RA770 gene product. In addition, the
CC   nucleic acid molecule, polypeptide or an effector/modulator of the
CC   nucleic acid or polypeptide, is used in monitoring or controlling the
CC   function of a gene or gene product influenced or modified by a DP119,
CC   DP444, DP810, DP685, WE474, DP160, RA977 or RA770 polypeptide, or in
CC   identifying substances that interact with the polypeptide. The present
CC   sequence is used in the exemplification of the present invention.

PT   Treating, preventing or ameliorating pathological conditions associated
PT   with dysregulation of the insulin signaling pathway (ISP) comprises
PT   administering to a subject an amount of a modulator of any of the
PT   proteins regulated by ISP.
XX
PS   Disclosure; SEQ ID NO 839; 70pp; English.
XX
CC   The present invention relates to a method for treating, preventing or
CC   ameliorating pathological conditions associated with dysregulation of the
CC   insulin signaling pathway (ISP). The method comprises administering to a
CC   subject a modulator for ISP-regulated proteins or a pharmaceutical
CC   composition comprising the described modulator. The method is useful for
CC   treating, preventing or ameliorating pathological conditions associated
CC   with dysregulation of the ISP such as Type II diabetes or Type A syndrome
CC   of insulin resistance. The present sequence is a human homolog of a
CC   Drosophila gene regulated by ISP. Note: The sequence data for this patent
CC   did not form part of the printed specification, but was obtained in
CC   electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20050085436.

PT New genome of Legionella pneumophila Paris strain and derived
PT polypeptides, useful for detection or identification of the strain and
PT for treatment and prevention of infections.
XX
PS Example 9; SEQ ID NO 7067; 660pp; English.
XX
CC The invention relates to an isolated or purified nucleotide sequences (I)
CC from Legionella pneumophila Paris strain. (I), and their related
CC sequences or fragments, are useful as primers and probes for detection
CC and amplification, including differentiation between the Paris and
CC Philadelphia strains of Legionella pneumophila and to prepare recombinant
CC (hybrid) polypeptides (II). (II) are also useful for preparation of
CC specific antibodies (Ab), also used for detection/identification of
CC Legionella, and some (I), specifically those involved in synthesis of
CC surface proteins, are targets for identification of inhibitors. (II), or
CC vectors that contain (I), are useful as vaccines and immunogenic
CC compositions, for treatment and prevention of infections by L.
CC pneumophila. The present squence represents a L. pneumophila DNA.

XX
CC   The invention relates to an isolated or purified nucleotide sequences (I)
CC   from Legionella pneumophila Paris strain. (I), and their related
CC   sequences or fragments, are useful as primers and probes for detection
CC   and amplification, including differentiation between the Paris and
CC   Philadelphia strains of Legionella pneumophila and to prepare recombinant
CC   (hybrid) polypeptides (II). (II) are also useful for preparation of
CC   specific antibodies (Ab), also used for detection/identification of
CC   Legionella, and some (I), specifically those involved in synthesis of
CC   surface proteins, are targets for identification of inhibitors. (II), or
CC   vectors that contain (I), are useful as vaccines and immunogenic
CC   compositions, for treatment and prevention of infections by L.
CC   pneumophila. The present squence represents a L. pneumophila DNA.

PT Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
PT in expression of a gene of a signature gene set.
XX
PS Claim 1; SEQ ID NO 3568; 44pp; English.
XX
CC The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
CC tumour

PS   Claim 1; SEQ ID NO 3748; 298pp; English.
XX
```

```
CC   The invention relates to a novel method for diagnosing and detecting the
CC   progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC   tumour in a patient, and differentiating metastatic liver cancer from
CC   hepatocellular carcinoma in a patient, involving detecting the level of
CC   expression of two or more genes represented in ABN93503-ABN97455 in a
CC   tissue sample. The method of the invention has hepatotropic, and
CC   cytostatic activity. The method is useful for diagnosing and detecting
CC   the progression of liver cancer, hepatocellular carcinoma and metastatic
CC   liver carcinoma in a patient. The method is useful for identifying
CC   expression profiles which serve as useful diagnostic markers as well as
CC   markers that can be used to monitor disease states, disease progression,
CC   drug toxicity, drug efficacy and drug metabolism. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

XX
PS Disclosure; SEQ ID NO 269; 346pp; English.
XX
CC The invention relates to a method of determining whether a patient will
CC respond to treatment with a farnesyl transferase inhibitor (FTI), by
CC analyzing the expression of gene that is differentially modulated in the
CC presence of an FTI. The method is useful for determining whether a
CC patient will respond to treatment with a FTI such as (B)-6-[amino(4-
CC chlorophenyl)(1-methyl-1H-imidazol-5-yl)methyl]-4-(3-chlorophenyl)-1-
CC methyl-2-(1H)quinolinone, monitoring the therapy of a patient, treating a
CC patient with leukemia with FTI if the analysis indicates that the patient
CC will respond. This sequence corresponds to a gene whose expression may be
CC modulated in the presence of FTI.

PT Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
PT in expression of a gene of a signature gene set.
XX
PS Claim 1; SEQ ID NO 166; 44pp; English.
XX
CC The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
CC tumour

PT   Diagnosing and detecting the progression of liver cancer, hepatocellular
PT   carcinoma or metastatic liver tumor in a patient, involves detecting the
PT   level of expression of two or more genes in a liver tissue sample.
XX
PS   Claim 1; SEQ ID NO 2404; 298pp; English.
XX
CC   The invention relates to a novel method for diagnosing and detecting the
CC   progression of liver cancer, hepatocellular carcinoma or metastatic liver
CC   tumour in a patient, and differentiating metastatic liver cancer from
CC   hepatocellular carcinoma in a patient, involving detecting the level of
CC   expression of two or more genes represented in ABN93503-ABN97455 in a
CC   tissue sample. The method of the invention has hepatotropic, and
CC   cytostatic activity. The method is useful for diagnosing and detecting
CC   the progression of liver cancer, hepatocellular carcinoma and metastatic
CC   liver carcinoma in a patient. The method is useful for identifying
CC   expression profiles which serve as useful diagnostic markers as well as
CC   markers that can be used to monitor disease states, disease progression,
CC   drug toxicity, drug efficacy and drug metabolism. Note: The sequence data
CC   for this patent did not form part of the printed specification, but was
CC   obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PT   differentially modulated in the presence of the inhibitor.
XX
PS   Disclosure; SEQ ID NO 219; 346pp; English.
XX
CC   The invention relates to a method of determining whether a patient will
CC   respond to treatment with a farnesyl transferase inhibitor (FTI), by
CC   analyzing the expression of gene that is differentially modulated in the
CC   presence of an FTI. The method is useful for determining whether a
CC   patient will respond to treatment with a FTI such as (B)-6-[amino(4-
CC   chlorophenyl)(1-methyl-1H-imidazol-5-yl)methyl]-4-(3-chlorophenyl)-1-
CC   methyl-2-(1H)quinolinone, monitoring the therapy of a patient, treating a
CC   patient with leukemia with FTI if the analysis indicates that the patient
CC   will respond. This sequence corresponds to a gene whose expression may be
CC   modulated in the presence of FTI.

PT   Classifying a breast cancer patient according to prognosis comprises
PT   determining the similarity between the level of expression of each of
PT   five genes in a cell sample taken from patient, to control levels.
XX
PS   Disclosure; SEQ ID NO 832; 226pp; English.
XX
CC   The invention relates to a method of classifying a breast cancer patient
CC   according to prognosis by determining the similarity between the level of
CC   expression of each of five genes for which markers are listed in the
CC   specification, in a cell sample taken from the breast cancer patient, to
CC   control levels of expression for each respective five genes to obtain a
CC   patient similarity value. The methods are useful for classifying a breast
CC   cancer patient according to prognosis. Kits and computer program products
CC   are useful for data analysis using the diagnostic, prognostic and
CC   statistical methods of the invention. This sequence corresponds to a
CC   marker used in the method of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
